tmux cheatsheet

P prefix, C-a (press, release, then the next key) • defined in `tmux.conf` unmarked rows are tmux defaults

SESSIONS

One session per project. Detach instead of quitting.

`tmux new -s proj`	new session
`tmux ls`	list sessions
`tmux a -t proj`	reattach
`tmux kill-session -t proj`	tear one down
P d	detach, leave it running
P s	pick a session from a list
P (/ P)	previous / next session
P $	rename the session

WINDOWS

Numbered from 1. C-S-←/→ and F1 take no prefix.

• P c	new window, same dir
P n / P p	next / previous window
P 1 … 9	jump to window by number
P w	pick a window from a list
P ,	rename the window
• C-S-← / C-S-→	move window left / right
• F1	renumber, closing gaps
P &	kill the window

PANES

Mouse is on: click to focus, drag a border to resize. "Same dir" is the active pane's working directory.

• P %	split left / right, same dir
• P "	split top / bottom, same dir
P ← ↓ ↑ →	move between panes
P o	next pane
P z	zoom / unzoom the pane
P { / P }	swap with previous / next
P Space	cycle through layouts
P !	break pane into a window
P x	kill the pane

POPUPS

Floating scratch windows. They close when the command exits.

• P C-t	`zsh`, same dir
• P C-j	`julia --project=.`
• P C-p	`ipython`
• P C-z	`nvim ~/.zshrc`

COPY MODE

Vi keys. Scrollback is 100,000 lines.

P [	enter copy mode
• mouse wheel	enter copy mode and scroll
h j k l	move the cursor
C-u / C-d	half page up / down
g / G	top / bottom of history
/ / ?	search forward / backward
n / N	next / previous match
Space	start selection
Enter	copy selection and leave
q	leave copy mode
P]	paste

CONFIG

• P r	reload `tmux.conf`
• P C-a	send a literal `C-a` to the program
P ?	list every key binding
P :	tmux command prompt

Settings worth remembering

- `escape-time 0`: Esc is instant in Neovim.
- Focus events and extended keys (`csi-u`) are on, so programs see focus changes and modifier combos.
- The terminal title follows the active pane's title.
- Status line: session on the left, host on the right. Catppuccin Mocha; needs a Nerd Font.
